Supported by the Institute for the Advancement of Food and Nutrition Sciences (IAFNS),

Technical Committee on Carbohydrates

Users of this database should provide attribution in the acknowledgement of any publications or presentations acknowledging Dr. Nicola McKeown as Principal Investigator and IAFNS as the funding agent, as follows, "Supported by the Technical Committee on Dietary Carbohydrates of the Institute for the Advancement of Food and Nutrition Sciences (IAFNS)." Detailed information can be found at: https://iafns.org/our-work/research-tools-open-data/dietary-fiber-database/

Please refer to the following website for additional information on IAFNS: https://iafns.org/about-us/who-we-are/

INTRODUCTION

The commonality to all fibers is the fact that they are non-digestible by endogenous enzymes; however, fiber is not a group of structurally similar compounds. As you can imagine, creating a comprehensive database linking fiber to a variety of health outcomes is complicated due to the complexity of defining fiber and the potential ways to classify fiber. For example, fiber includes isolated fibers (e.g. pectin and gum), fiber-enriched ingredients (oat bran, psyllium, or lupin kernel flour enriched breads), cereal fibers in whole-grains, fruit or vegetable fibers, dietary pulses, or fiber supplements. This database was developed to serve as a resource to assist health researchers in linking fibers to a variety of health outcomes in a quick and efficient manner.

A database capturing published research on fiber needs to be flexible from the standpoint of data extraction, striking a balance between standardizing data fields and adequately capturing pertinent information from individual publications. It also needs to be flexible from a user perspective. For example, a researcher using this database may be interested in searching the fibers at the level of the food source and comparing fiber from cereal sources to fiber from fruits and vegetables. On the other hand, a researcher may be interested in fiber intake at the level of the cereal components - cellulose, lignin & hemicelluloses, primarily insoluble fibers, to fruit and vegetable components such as pectins, gums, mucilages, and primarily soluble fibers. As such, the goal of this database is to meet the needs of a variety of users, providing them with a tool to search fibers and health outcomes captured in the published literature, directing them to potential literature of interest. In creating this database, data extractors used the description of the fiber as it was presented in the publication, and, as such, multiple fiber descriptions may capture the same type of fiber. Appendix 1 provides a list of all fiber types captured in the database, and we recommend that you review this full list before beginning your search for fiber types. We have also included, in Appendix 2, some recommendations for searching groups of fibers that you may wish to consider.

The number of publications examining fiber and health will continue to increase, and our goal is to update this database regularly, as funding allows, to incorporate new literature. Our research group will continue to work on updating this database, and we are available to help you with any aspect of using this database. We have used this database to create a fiber evidence map. An evidence map is a method of identifying, organizing, and summarizing scientific evidence on a broad topic and can provide a foundation for other work such as systematic reviews and identifying research gaps. We encourage you to provide your feedback, and we will continue to incorporate changes, where necessary, to ensure that we build a sustainable database for years to come.

DATABASE OBJECTIVES

The objectives of this database are to:

- 1. Systematically compile and provide access to primary, English-language, peer-reviewed science linking fiber intake in humans to one or more of 9 potential health benefits
- 2. Provide researchers with a tool to understand how different fibers are characterized in studies
- 3. Facilitate researchers in identifying gaps in the current research
- 4. Create a database to serve as a starting foundation of primary human literature for conducting evidence-based reviews and metaanalyses
- 5. Efficiently assist researchers in identifying fibers of interest

This database should serve as a foundation for future work. Specific inclusion and exclusion criteria, detailed below, were applied in determining database eligibility; thus, this database is *not* intended to serve as a sole source for identifying all possible fiber literature for the purposes of conducting a meta-analysis or systematic review. This database contains **P**opulation, Intervention, **C**omparator, and **O**utcome (PICO) data to help users formulate and narrow the focus of their research question. It is expected that secondary searches will be conducted to augment this database. If conducting a systematic review, we recommend reviewing the following source: *Liberati A, Altman DG, Tetzlaff J, Mulrow C, Gøtzsche PC, Ioannidis JPA, et al. The PRISMA statement for reporting systematic reviews and meta-analyses of studies that evaluate health care interventions: Explanation and elaboration. <i>PLoS Medicine 2009;6(7):e1000100*. It is important to note that for this version of the database, the screening of studies and data extraction were performed for the majority of papers by only 1 person; as such, users are strongly encouraged to confirm the data they require is captured. We imagine that the users will narrow down their search to fiber(s) of interest and will populate their version of the database with additional data (such as results).

BRIEF SUMMARY OF METHODS FOR ORIGINAL DATABASE (Version 1, capturing literature from 1946-Sept 2013)

We conducted a search in Pubmed, via the OVID Medline search engine, to identify research on fiber intervention and prospective observational studies and 9 physiological health effects identified at the Ninth Vahouny Fiber Symposium in 2010. The 9 health effects of interest were as follows:

- 1. Total and LDL cholesterol
- 2. Post-prandial glucose & insulin
- 3. Blood pressure
- 4. Increased fecal bulk and laxation
- 5. Transit time (time it takes food to move through digestive track)
- 6. Colonic fermentation & SCFA production

- 7. Modulation of colonic microflora
- 8. Weight loss, weight maintenance, and reduction in adiposity
- 9. Increased satiety
- 10. Bone health (added in 2016 with Version 3 due to growing interest, not a Vahouny outcome)

We applied the following inclusion and exclusion criteria to determine eligibility for inclusion in our fiber database:

Inclusion criteria:

- Studies published from 1946 to September 2013 identified in OVID MEDLINE® and indexed in PubMed (with a PubMed ID)
- Published in English
- Abstracts meeting the above criteria along with the specific search term criteria for a fiber term <u>and</u> a Vahouny health outcome term (an extensive list of search terms was developed by the research team with input from the IAFNS Technical Committee on Carbohydrates

Specific exclusion criteria:

- Reviews, bibliographies, case reports
- Observational studies (ie. cross-sectional or prevalence studies)
- Fiber was not orally ingested (ie. administered intravenously, patients on enteral nutrition)
- Population is infants (<3 years)
- Population is pregnant and/or breastfeeding women
- Population has any type of disease* (including, but not limited to, cancer, bowel disease, renal failure, ileostomy, depression, autism, PCOS)
 - *with the exception of Type II diabetes, digestive problems, hyperlipidemia, hypercholesterolemia, hypertension, & metabolic syndrome which are not exclusion criteria; Also, common/mild constipation is not an exclusion criteria.
- Intervention has no concurrent control arm
- Fiber dose not clearly reported
- No fiber intervention
- An outcome of interest is not reported
- Intervention not sufficiently controlled to measure the effect of the fiber
- Synbiotic studies
- Animal-only studies
- In vitro studies

NOTE: NEW BEGINNING WITH VERSION 4.1

As noted by the cross-out above, younger populations are no longer excluded from this database. Versions 1.0-4.0 of the database excluded populations <3 years of age. Beginning with version 4.1, all ages are included in the database. For version 4.1, a Medline search from 1946-Feb 2018 was conducted to identify and include all relevant literature on these younger populations that was previously excluded, assuming the literature met all other inclusion and exclusion criteria for the database. Along these lines, a small number of identified studies examined outcomes in neonates or infants following fiber interventions that were administered to their mothers during pregnancy. These papers were included only in situations where outcomes were examined in the infants themselves after birth (not the pregnant mothers). Literature on all ages is included in subsequent database updates to allow for study of fiber intake across the lifespan.

Brief summary of screening process, Version 1:

We identified n=7,257 potentially relevant abstracts. These n=7,257 were screened at the abstract level, following which n=5,210 were excluded as irrelevant. The remaining n=2,047 were then full-text screened, and n=813 manuscripts were identified as relevant and included in the database. The final database contains n=868 entries due to the fact that a small number of manuscripts detailed multiple, distinct studies within the same manuscript (n=37 detailed 2 studies, n=5 detailed 3 studies). These were entered as separate entries. We also included n=8 eligible

papers identified via hand search at the request of the IAFNS carbohydrate committee. We anticipate adding additional papers in updated versions, identified via hand searches, upon request if they meet the inclusion criteria.

General rules for data extraction

- If needed (due to space limitations of the database), information listed in the <u>abstract</u> was prioritized.
- Information provided is based on how authors reported in the manuscript. No interpretations or quality assessments were made during data extractions, with the exception of values presented with the approximate (~) symbol.
- Use of the ~ symbol indicates that the value was not presented in the manuscript but was able to be calculated by data extractors using available information in the manuscript.
- Use of "NR" indicates "not reported."

BRIEF SUMMARY OF METHODS FOR DATABASE VERSION 9.3 (released April 2024)

Version 9.3: We replicated the earlier Medline searches, restricting to literature published from September to end of December 2023. Data from before this timeframe was already captured in previous versions of the database. The same screening and data extraction methods were applied as described above for the original database. Please note that additions made in previous database versions (ie. adding bone health outcomes and incorporating literature on all age groups) are included in this version and will continue to be included in all versions moving forward.

The final database version 9.3 includes n=1,326 entries. Version 9.2 previously contained n=1,318 entries. Please note that the number of entries in versions 9.2 and 9.3 is less than version 9.1 (n=1,351), as the database has undergone additional detailed review and cleaning, and 27 entries were removed between versions 9.1 and 9.2 as they were determined to not detail a true dietary fiber exposure, not to be adequately controlled, or not sufficient to isolate the effect of the fiber.

A NOTE ON PUBMED IDS AND MULTIPLE ENTRIES

If a single manuscript detailed multiple, distinct studies, these studies were entered as multiple entries into the database. Such entries are denoted by numbers at the end of the title (ie. Title [1], Title [2], etc). Thus, UniqueID (not Pubmed ID) is the unique identifier for entries in the database.

DATABASE CODEBOOK

PUBLICATION INFORMATION

FiberID (FiberID)

Unique Identifier

Assigned unique identifier since PubMed ID is not necessarily unique (see below, PubMed ID)

DOI (DOI)

Digital Object Identifier Link to full manuscript

PubMed ID (PMID)

Pubmed Identifier

Manuscripts with multiple entries are denoted by numbers at the end of the title (ie. Title [1], Title [2], etc).

Title of manuscript (Title)

In cases where the study was entered more than once (previously detailed in ID field above), this was indicated in the title by adding [#] to the end of the title field. For example, the following manuscript contained two, distinct studies and, thus, titles were entered as follows:

The effect of unabsorbable carbohydrate on gut hormones. Modification of post-prandial GIP secretion by guar. [1]

The effect of unabsorbable carbohydrate on gut hormones. Modification of post-prandial GIP secretion by guar. [2]

Author list (Author)

Year of Publication (Pubyear)

Year of publication, manually entered by data extractors.

Country of publication (Country)

Categorical variable (select one)

Data extractors were instructed to select country where study was conducted. If country where study was conducted was not detailed, extractors were instructed to use the country of the first author's affiliation.

Version (Version)

Categorical variable (select one)

- 4.0
- 4.1
- 5.0
- 6.0
- 7.0
- 8.0
- 8.1
- 8.2
- 9.1
- 9.2
- 9.3

This database was originally updated annually, and the 'version' variable was added in 2018 to designate, moving forward from version 4.0, which entries were added to the database in which version. Thus, all studies from version 4.0 (published in January 2018) and before are designed "4.0." Studies added to versions after 4.0 are designated as their respective version. Version 4.1 was published in September 2018, version 5.0 in April 2019, version 6.0 in January 2021, version 7.0 in December 2021, version 8.0 in October 2022, version 8.1 in January 2023, version 8.2 in April 2023, version 9.1 in September 2023, version 9.2 in January 2024, and version 9.3 in April 2024. Updates were done annually through version 7.0. Beginning with version 8.0, updates occurred multiple times per year.

STUDY DESIGN DETAILS

What was the study design? (Design)

Categorical variable with the following options (select one):

- Randomized Controlled Trial (Crossover)
- Randomized Controlled Trial (Parallel)
- Non-Randomized Controlled Trial
- Other (if other, please specify using text)

Was the study blinded? (Blindness)

Categorical variable with the following options (select one):

• Single blind

- Double blind
- Unspecified
- Other (if other, please specify using text)

Study diet type (Diet)

Categorical variable with the following options (select one):

- Weight loss
- Isocaloric/maintenance
- Hypercaloric
- Acute feeding study
- Unspecified
- Other (if other, please specify using text)

Level of feeding control for dietary intervention (Feedcontrol)

Categorical variable with the following options (select one):

- Food recommended
- Food partially provided
- All food provided
- Unspecified
- Other (if other, please specify using text)

Note: In some studies, all food was provided with the exception of a few hundred discretionary calories. In these cases, data extractors were instructed to select 'All food provided.'

Sample size (Sampsize)

Total sample size (fill-in text variable)

If study was randomized, extractors were instructed to use number randomized. If unable to do that, extractors were instructed to use total study population or the n presented in the abstract. If the manuscript presented multiple n's for different sample groups, extractors were instructed to sum and enter the total n in the database.

Is there a run-in period? (Runin)

Categorical variable with the following options (select one):

Yes

- No
- Unspecified
- Not applicable

Is there a washout period? (Washout)

Categorical variable with the following options (select one):

- Yes
- No
- Unspecified
- Not applicable

Did the administered fiber dose change over the course of the study? (Dosechange)

Categorical variable with the following options (select one):

- Yes
- No

STUDY POPULATION DETAILS

Was the study population adolescents (12-17 years)? (Age_adol)

1 indicates 'yes', missing indicates 'no'

Was the study population adults (18+ years)? (Age_adult)

1 indicates 'yes', missing indicates 'no'

Was the study population children 3-11 years of age? (Age_child)

1 indicates 'yes', missing indicates 'no'

Was the study population children from 1 year to less than 3 years of age? (Age_baby)

1 indicates 'yes', missing indicates 'no'

^{*}please note, adolescent population was previously defined as 12-19 years; In 2022, this was revised to be 12-17 years.

^{*}please note, adult population was previously defined as 20+ years; In 2022, this was revised to be 18+.

Was the study population children less than 1 year of age? (Age_infant)

1 indicates 'yes', missing indicates 'no'

Was the study population another age group (not covered by adolescents, adults, and/or children)? (Age_oth)

1 indicates 'yes', missing indicates 'no'

Study population, mean age in years (Age_mean)

Mean age (fill-in text variable)

please note that studies where entire population was children <3 years were excluded

Study population, age range in years (Age_range)

Age range (fill-in text variable)

please note that studies where entire population was children <3 years were excluded

Study Population, mean BMI, kg/m² (BMI_mean)

Mean BMI of study population, kg/m² (fill-in text variable)

Study population, BMI Range, kg/m² (BMI_range)

BMI range of study population, kg/m² (fll-in text variable)

Was the population diabetic? (Blhealth_diab)

1 indicates 'yes', missing indicates 'no'

Was the population experiencing digestive problems? (Blhealth_digest)

1 indicates 'yes', missing indicates 'no'

Was the population healthy? (Blhealth_healthy)

1 indicates 'yes', missing indicates 'no'

Was the population hyperlipidemic/hypercholesterolemia? (Blhealth_hyperlip)

1 indicates 'yes', missing indicates 'no'

Did the population have hypertension? (Blhealth_hyperten)

1 indicates 'yes', missing indicates 'no'

Did the population have metabolic syndrome? (Blhealth_met)

1 indicates 'yes', missing indicates 'no'

Did the population have some other baseline health status not captured above? (Blhealth_oth)

1 indicates 'yes', missing indicates 'no'

If yes, please specify using text (Blhealth_othspec)

Sex, % male (Sex)

% of male participants (fill-in text variable)

INTERVENTION EXPOSURES (FIBER TYPES)

The database allowed for entry of up to 4 fiber types examined in the manuscript

GENERAL NOTES

- If "combination/mixture" was selected as fiber type, both description and dose variables were completed. For all other fiber types, description variables were left blank, and only dose 1 was completed. In a limited number of cases, dose 1 and 2 may have been completed for a non-combination fiber exposure if the paper detailed more than four exposures, requiring multiple exposures to be grouped for entry.
- In the case where several doses of the same exposure were given (for example, in increasing increments), data extractors were instructed to report the maximum dose at the maximum duration. Please note the earlier question in 'design' section indicating whether the administered fiber dose changed over the course of the study.
- If two, different groups were on different doses of the same fiber, it was entered as two exposure groups in addition to the control; <u>vs.</u> if the *same* group was on different doses of the same fiber during the study, one exposure was reported, and the dose reflected the maximum.
- Exposure doses are per day
- The data allowed for entry of up to 4 fiber exposures examined in the manuscript. The study team addressed cases where more than 4 exposures were examined on a case-by-case basis. In these instances, exposures were logically grouped for entry to preserve all information. See Appendix 3 for an example.

FIBER 1

Fiber 1- Type (Ftype1)

Fiber type (categorical variable with option for text fill in if 'other' is selected) Please note there is an option to specify 'Combination/mixture' if appropriate See Appendix 1 for full list of fiber types included in the database

Fiber 1- Group (Fgroup1)

Fiber group (please note that not all fiber types are classified into a group)

Fiber 1-if combination was selected for fiber type, 1st fiber type in combination (Descrip1_1)

Fill in text variable

Fiber 1-if combination was selected for fiber type, 2nd fiber type in combination (Descrip1 2)

Fill in text variable

Fiber 1- Dose 1, g (Dose1_1)

Exposure dose of fiber intervention, grams unless otherwise specified (fill-in text variable)

Dose should reflect dose of fiber selected in 'fiber type' field above;

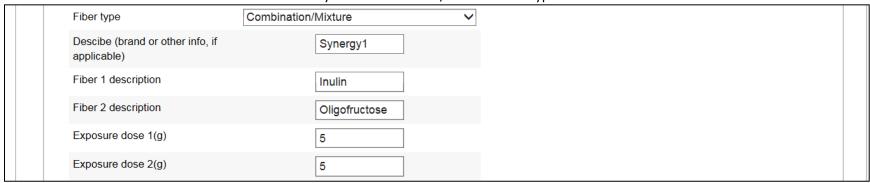

If 'Combination/mixture' was selected, dose 1 should reflect dose of fiber in 'descript1_1' variable above

Fiber 1- Dose 2, g (Dose1_2)

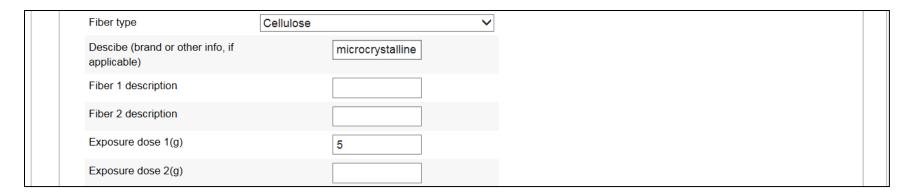

Exposure dose of fiber intervention, grams unless otherwise specified (fill-in text variable)

Typically used for combination/mixtures. Dose 2 would, thus, reflect dose of fiber selected in 'Descrip1 2' variable above

The screen shot of the database below illustrates entry of a 'Combination/mixture' fiber type:

The screen shot of the database below illustrates entry of a single fiber type:

Fiber 1-Duration of Intervention (Duration1)

Duration of fiber intervention (text fill-in specifying days, weeks, months, as appropriate)

Fiber 1- How was the fiber administered? (Admin1)

Categorical variable with the following options (select one):

- Diet
- Single food
- Powder
- Tablet
- Beverage
- Combination of foods
- Combination of beverage + foods
- Unspecified
- Test meal

REPEAT AS ABOVE FOR FIBERS 2-4

FIBER 2

Fiber 2- Type (Ftype2)

Fiber 2- Group (Fgroup2)

Fiber 2-if combination was selected for fiber type, 1st fiber type in combination (Descrip2_1)

Fiber 2-if combination was selected for fiber type, 2nd fiber type in combination (Descrip2_2)

Fiber 2- Dose 1, g (Dose2_1)

Fiber 2- Dose 2, g (Dose2 2)

Fiber 2-Duration of Intervention (Duration2)

Fiber 2- How was the fiber administered? (Admin2)

FIBER 3

Fiber 3- Type (Ftype3)

Fiber 3- Group (Fgroup3)

Fiber 3-if combination was selected for fiber type, 1st fiber type in combination (Descrip3_1)

Fiber 3-if combination was selected for fiber type, 2nd fiber type in combination (Descrip3_2)

Fiber 3- Dose 1, g (Dose3_1)

Fiber 3- Dose 2, g (Dose3_2)

Fiber 3-Duration of Intervention (Duration3)

Fiber 3- How was the fiber administered? (Admin3)

FIBER 4

Fiber 4- Type (Ftype4)

Fiber 4- Group (Fgroup4)

Fiber 4-if combination was selected for fiber type, 1st fiber type in combination (Descrip4_1)

Fiber 4-if combination was selected for fiber type, 2nd fiber type in combination (Descrip4_2)

Fiber 4- Dose 1, g (Dose4_1)

Fiber 4- Dose 2, g (Dose4_2)

Fiber 4-Duration of Intervention (Duration4)

Fiber 4- How was the fiber administered? (Admin4)

INTERVENTION COMPARATORS

The database allowed for entry of up to 4 comparators examined in the manuscript

GENERAL NOTES

- If the diets were exactly the same except for the fiber intervention, the term 'matched ' may be used to describe comparator diet
- The comparator variables were all free text variables (fill-in), with the exception of the 'how administered' question which was categorical.

COMPARATOR 1

Comparator 1- what was the comparator used in the intervention (Comparator1)

text fill-in, including any available information on comparator (may include food type, brand, food form, etc)

Comparator 1-Dose (Cdose1)

Text fill-in

Data extractors instructed to specify units and provide dose in grams whenever possible

Comparator 1-Duration of comparator intervention (Cduration1)

Duration of comparator intervention (text fill-in specifying days, weeks months, as appropriate)

Comparator 1-How was the comparator administered to participants? (Cadmin1)

Categorical variable with the following options (select one):

- Diet
- Single food
- Powder
- Tablet
- Beverage
- Combination of foods
- Combination of beverage + foods
- Unspecified
- Test meal

REPEAT AS ABOVE FOR COMPARATORS 2-4

COMPARATOR 2

Comparator 2- what was the comparator used in the intervention (Comparator2)

Comparator 2-Dose (Cdose2)

Comparator 2-Duration of comparator intervention (Cduration2)

Comparator 2-How was the comparator administered to participants? (Cadmin2)

COMPARATOR 3

Comparator 3- what was the comparator used in the intervention (Comparator3)

Comparator 3-Dose (Cdose3)

Comparator 3-Duration of comparator intervention (Cduration3)

Comparator 3-How was the comparator administered to participants? (Cadmin3)

COMPARATOR 4

Comparator 4- what was the comparator used in the intervention (Comparator4)

Comparator 4-Dose (Cdose4)

Comparator 4-Duration of comparator intervention (Cduration4)

Comparator 4-How was the comparator administered to participants? (Cadmin4)

OUTCOMES

We extracted information on up to 8 outcomes detailed in the manuscript. If more than 8 outcomes were detailed, entry of Vahouny outcomes was prioritized. Non-Vahouny outcomes were included only as space allowed, or in the list of other outcomes (variable *outcomes_other*). Extractors were also told to prioritize the central outcomes of the manuscript (for example, those highlighted in the abstract) if more than 8 Vahouny outcomes were examined.

The 'group' variables are categorical, identifying the outcome as a Vahouny vs. other type of outcome with categorical choices detailed below. 'V' indicates Vahouny outcome, 'O' indicates other outcome group. *If the outcome did not fall into a 'V' or 'O' outcome group, data extractors could select "Other" and specify using text.* See Appendix 4 for a list of outcomes by outcome group.

OUTCOME 1

Outcome examined #1 (Outcome1)

Categorical variable with the following options (select one):

- Appetite regulation
- Bacteria
- Blood pressure
- Blood pressure, diastolic
- Blood pressure, systolic
- Body mass index
- Body weight
- Bowel movements
- Cholesterol (blood), HDL

- Cholesterol (blood), LDL
- Cholesterol (blood), total
- Cholesterol (blood), VLDL
- Constipation
- C-peptide
- Defecation
- Fat distribution
- Fat, body fat
- Fecal weight
- Fecal weight, dry
- Fecal weight, wet
- Fermentation
- Gastric emptying
- Glucose (blood), fasting
- Glucose (blood), postprandial
- Hemoglobin A, glycosylated
- HOMA
- HOMA-IR
- Hypertension
- Insulin
- Insulin (blood), fasting
- Insulin (blood), postprandial
- Insulin sensitivity, EHGU
- Insulin sensitivity, FSVITT
- Insulin sensitivity, IST
- Insulin sensitivity, OGTT
- Laxation
- Microbiota/microflora
- Proinsulin
- Satiety-related hormones
- SCFA production
- Skinfold thickness

- Stool consistency
- Stool retention
- Subjective appetite
- Transit time
- Transit time, bowel
- Transit time, colon
- Transit time, colonic
- Transit time, gastrointestinal
- Transit time, gut
- Transit time, intestinal
- Triglycerides (blood)
- Triglycerides, postprandial
- Waist circumference
- Waist-hip ratio
- Weight loss/gain
- Other (if other, please specify using text)

Outcome is associated with which outcome group of interest? (Group1)

Categorical variable with the following options (select one):

- V: total and LDL cholesterol
- V: postprandial glycemic/insulinemia
- V: blood pressure
- V: fecal bulk/laxation
- V: transit time
- V: modulation of colonic microflora
- V: colonic fermentation/short-chain fatty acid production
- V: weight/adiposity
- V: satiety
- O: lipids
- O: glucose & insulin metabolism
- O: GI symptoms
- O: bone-related outcomes

• Other (if other, please specify using text)

REPEAT AS ABOVE FOR OUTCOMES 2-8

OUTCOME 2

Outcome examined #2 (Outcome2)

Outcome is associated with which outcome group of interest? (Group2)

OUTCOME 3

Outcome examined #3 (Outcome3)

Outcome is associated with which outcome group of interest? (Group3)

APPENDIX 2: SUGGESTIONS FOR SEARCHING FIBER TYPES (updated Jan 2023)

This is intended to help researchers interested in grouping related fibers in a search. Please note, in your search, consider the terms *fiber* and *fibre* interchangeable.

Potential groupings of search terms for various fiber types:

| If you are interested in: | Consider also searching for: | | |
|-------------------------------|---|--|--|
| Parloy or barloy bota glucans | Barley kernels, barley glucans, β-glucans unspecified, | | |
| Barley or barley beta-glucans | barley flour, barley grain, barley tempe, barley bran | | |
| Oats or oat beta-glucan | Oat bran, oat fiber, oat kernels, oat tempe | | |
| | Cellulose, hydroxypropyl methylcellulose (HPMC), | | |
| Cellulose and/or modified | hydroxypropyl cellulose (HPC), methyl cellulose (MC), | | |
| cellulose-based gums | carboxymethyl cellulose (CMC/cellulose gum), | | |
| | microcrystalline cellulose (MCC) | | |
| Glucomannan | Konjac-mannan | | |
| | Balsamodendron mukul, acacia, tragacanth, karaya, ghatti, | | |
| Gums | locust bean gum, psyllium, guar gum, alginates, agar, | | |
| | carrageenan extracts from plants, seaweed gums, seed | | |
| | gums | | |
| High amylose starch | Resistant starch | | |
| | Fructans, fructooligosaccharide, inulin, oligofructose, | | |
| Inulin-type fructans | oligofructose-enriched inulin, short-chain | | |
| | fructooligosaccharide, agave fructans, FOS, scFOS, | | |
| | Orafti®Synergy1 | | |
| Galacto Oligosachbaridos | Galacto-oligosaccharides (GOS),scGOS, trans-galacto- | | |
| Galacto-Oligosachharides | oligosaccharides (TOS) | | |
| Legume fiber | Legume fiber/bean fiber, bean fiber, pea fiber | | |

| Locust bean gum | Gum, carob, galactomannan | | |
|--------------------|--|--|--|
| Doctin | Sugar beet fiber, sugar cane fiber, beet fiber, citrus peel | | |
| Pectin | fiber, apple fiber | | |
| Psyllium | Psyllium seed husk, ispaghula husk, ispaghula, isapgol | | |
| Posistant dovtrins | Resistant maltodextrin, resistant dextrin, dextrin, | | |
| Resistant dextrins | cyclodextrin, wheat dextrin, soluble fiber dextrin | | |
| | Resistant starch, resistant starch type 2, resistant starch | | |
| Resistant starch | type 3, resistant starch type 4, retrograded resistant starch, | | |
| | high amylose maize starch, high amylose starch, green | | |
| | banana starch, raw potato starch, raw tuber starches | | |
| | amylase-resistant starch | | |
| Seaweed gums | Carrageenans, alginates, agar | | |
| | Galactomannans: locust bean gum, guar gum, tara gum, | | |
| Seed gums | fenugreek, cassia gum and others | | |
| | Mesquite gum, psyllium seed gum, tamarind kernel | | |
| | powder, flaxseed gum, quince seed gum, oat gum | | |
| Soy bean fiber | Soy cotyledon fiber, soy fiber, soybean, soy hulls | | |
| Wheat bran | Bran, wheat kernels, wheat fiber, wheat bran, bran added, | | |
| | arabinoxylans, arabinoxylan-oligosaccharides, cereal fiber | | |

APPENDIX 3: DATA ENTRY EXAMPLE

The following example is provided to illustrate the complexity of data extraction for some entries. It also serves to illustrate, first-hand, some of the data entry notes described throughout the manual pertaining to capturing more than 4 fibers and approximating doses in grams.

Pubmed ID 19155430

Kendall et al (2008) 'Effect of novel maize-based dietary fibers on postprandial glycemia and insulinemia'

This acute study supplied participants with 7 test beverages containing the 7 products illustrated in the table below. Test beverages were composed of 25g (dry weight) of the test fiber product added to an identical base of sucralose and citric acid (lemonade).

Table 1. Composition of the Test Products

| Test Meal | Product | Average MW (Da) | % Fiber (dsb) | AOAC Method |
|--------------|-------------------------|--------------------|---------------|----------------|
| A | Pullulan | 486000 | 85 | 991.43 |
| В | Pullulan & Soluble Corn | | | |
| | Fiber-70 | 233800 | 77 | 2001.03 |
| C | Soluble Corn Fiber-70 | 1600 | 70 | 2001.03 |
| D | Resistant Starch-60 | 100000 | 58 | 991.43 |
| E | Resistant Starch-75 | 8000 | 78 | 991.43 |
| F | Soluble Corn Fiber-70 & | | | |
| | Resistant Starch-60 | 51000 | 64 | 2001.03 |
| G | Soluble Fiber Dextrin | 6500 | 64 | 2001.03 |

As the database is able to capture up to 4 exposures, and this study used 7, exposures were logically grouped for entry as indicated in the table below.

In addition, as the % fiber per product was provided, rather than fiber in grams, doses in grams were calculated for entry (indicated in the database using the ~ symbol). Since fibers had to be grouped, the maximum dose was entered for the exposure group as indicated in red. As noted throughout this manual, doses correspond to fiber type selected in the relevant fiber 1-4 exposure fields. Despite the need to group, users would still be directed to this manuscript upon searching for any of the four following fibers examined: pullulan, corn fiber, resistant starch, or dextrin.

| | | % Fiber | Approximated fiber dose (g) |
|--------------------------------------|------------------------------------|---------|-----------------------------|
| Exposure 1 | Pullulan | 85 | ~ 21.3 |
| Fiber type: Pullulan | Pullulan and soluble corn fiber-70 | 77 | ~ 19.3 |
| Exposure 2 | Soluble corn fiber-70 | 70 | ~ 17.5 |
| Fiber type: Soluble corn fiber | Soluble corn fiber-70 and RS-60 | 64 | ~ 16.0 |
| Exposure 3 | Resistant starch-60 | 58 | ~ 14.5 |
| Fiber type: Resistant starch | Resistant starch-75 | 78 | ~ 19.5 |
| Exposure 4 Fiber type: Dextrin | Soluble fiber dextrin | 64 | ~ 16.0 |

Fiber type and dose information entered into the database for exposures 1-4 are identified in red.

APPENDIX 4: LIST OF OUTCOMES BY ASSOCIATED OUTCOME GROUP

O-Bone-Related Outcomes

Absolute apparent calcium absorption

Absolute apparent magnesium absorption

Absolute calcium absorption

Apparent calcium absorption

Apparent calcium balance

Apparent calcium retention

Apparent copper retenttion

Apparent iron absorption

Apparent iron balance

Apparent magnesium absorption

Apparent magnesium balance

Apparent magnesium retention

Apparent zinc absorption

Apparent zinc balance
